

MOGAMI's Keyboard Cable

MOGAMI Cable has released its Gold Keyboard Cable, available in both balanced and unbalanced.

This is the first MOGAMI cable designed exclusively for keyboards.

Unlike instrument cables originally designed for guitars that *can* be used with keyboards, MOGAMI Gold Keyboard Cables deliver clear sound from high-end keyboards.

Two types of Gold Keyboard Cable are available. MOGAMI Gold Key S is an extremely neutral, unbalanced cable with very wide bandwidth for highly detailed, accurate sound.

It is made from MOGAMI's 2965 cable, which features Ultra High Density spiral shield for noise-free transmission. The Gold Key SB balanced cable harnesses the full benefits of the balanced outputs on high-end keyboards: higher output, noise cancelling, superior dynamics. These cables use MOGAMI stereo line/mic cable for wider bandwidth with dead silent background noise.
